APPLICANT:

SAHM, HERMANN

PPLICANT: KENNERKNECHT,

NICOLE

INFORMATION:

```
Sequence 3016, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: GARY Breton et. al
ITILE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO F
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO F
CURRENT APPLICATION NUMBER: US/09/489,039A

CURRENT APPLICATION NUMBER: US/09/489,039A

CURRENT TILING DATE: 1200-01-27

PRIOR APPLICATION NUMBER: US/09/117,747

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 6, Application US/09471803A

Patent No. 66:3545

GENERAL INFORMATION:
APPLICANT: KENNERKNECHT, NICOLE
APPLICANT: SAHM, HERMANN
APPLICANT: SHAM, HERMANN
APPLICANT: PFEFFERLE, WALTER
TITLE OF INVENTION: NUCLECTIOE SEQUENCE CODING FOR THE EXPORT OF
TITLE OF INVENTION: NUCLECTIOE SEQUENCE CODING FOR THE EXPORT OF
TITLE OF INVENTION: 150LATION THEREOF AND USE THEREOF
TITLE OF INVENTION: 150LATION THEREOF AND USE THEREOF
TITLE OF INVENTION: 150LATION THEREOF AND USE THEREOF
TITLE OF INVENTION: 150LATION THEREOF AND USE THEREOF
TITLE OF INVENTION: 150LATION THEREOF AND USE THEREOF
TITLE OF INVENTION: 150LATION THEREOF AND USE THEREOF
TITLE OF INVENTION: 150LATION THEREOF AND USE THEREOF

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium. Coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nakagawa

The arrays are used to corynebacterium glutamicum, polynucleotides. The arrays are used to analyse C. glutamicum, particularly for monitoring a fermentation process to determine expression levels of C. glutamicum cellular mRNA. Such monitoring particularly differentiates between expression levels of different strains of C. glutamicum and allows the adjustment of different culture and fermentation conditions. ACA00010-ACA02188 represent C. glutamicum derived polynucleotides described in the disclosure of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ACA01294
                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                       This invention describes a novel isolated nucleic acid (I) from coryneform bacteria used for the fermentative production of selected L-amino acids, by fermenting the amino acid-producing coryneform in which at least the Iry gene has been weakened or amplified, then isolating amino acids that have accumulated in the medium or cells. (I) is used to transform coryneforms for production of L-amino acids, specifically lysine and isoleucine, which are used in medicine and particularly as animal feed supplement. It may also be used as probes and primers for isolating related sequences. Regulating expression of (I) improves production of amino acids, especially of L-lysine. This sequence encodes the Corynebacterium glutamicum lrp protein which is used in the method described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SG

Such monitoring particularly differentiates between expression levels of different strains of C. glutamicum and allows the adjustment of different culture and fermentation conditions. ACA00108 represent C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Corynebacterium

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-376931/40.

The arrays are used to corynebacterium squatamicum, particularly for monitoring a fermentation process to determine expression levels of C. glutamicum cellular mRNA. Such monitoring particularly differentiates between expression levels of different strains of C. glutamicum and allows the adjustment of different culture and fermentation conditions. ACA00010 ACA02188 represent C.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 吊
This invention describes a novel isolated polynucleotide (I) containing at least one sequence that (i) is 70% identical with a sequence that encodes at least one of 251 amino acid (aa) (3) or 108 aa (5) polypeptides; (ii) encodes a polypeptide at least 70% identical with (3) or (5); (iii) is the complement of (i) or (ii), or (iv) contains at least 15 consecutive bases from (i) - (iii). The invention also describes (a) protein derived from sequences of 753 bp (2) or 324 bp (4); (b) coryneform microorganisms, especially Corynebacterium, transformed with
                                                                                                                                                                                                                                         Claim 5;
                                                                                                                                                                                                                                                                                     New export genes from coryneform bacteria, useful for increasing fermentative production of branched-chain amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Corynebacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      animal

(I) is used for transformation of coryneform bacteria being used for fermentative production of branched-chain amino acids, specifically leucine, isolaucine and valine, which are useful in medicine and animal nutrition. (I) can also be used as source of primers and probes for isolation of related sequences. Transformation with (I) increases yield of branched-chain amino acids. This sequence encodes the corynebacterium glutamicum ATCC 14752 brnE protein described in the method of the invention
Coryneform bacterium; amino organic acid synthesis; ds.

                                                                                                                                                                                                                                                 This invention describes a novel isolated nucleic acid (I) from coryneform bacteria used for the fermentative production of selected L-amino acids, by fermenting the amino acid-producing coryneform in which at least the 1rp gene has been weakened or amplified, then isolating amino acids that have accumulated in the medium or cells. (I) is used to transform coryneforms for production of L-amino acids, specifically lysine and isoleucine, which are used in medicine and particularly as animal feed supplement. It may also be used as probes and primers for isolating related sequences. Regulating expression of (I) improves production of amino acids, especially of L-lysine. This sequence encodes a fragment of the Corynebacterium glutamicum 1rp protein which is used in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                   amino acids, by fermenting the amino acid-producing coryneform in which at least the lrp gene has been weakened or amplified, then isolating amino acids that have accumulated in the medium or cells. (I) is used to transform coryneforms for production of L-amino acids, specifically lysine and isoleucine, which are used in medicine and particularly as animal feed supplement. It may also be used as probes and primers for isolating related sequences. Regulating expression of (I) improves production of amino acids, especially of L-lysine. This sequence encodes a fragment of the Corynebacterium glutamicum lrp protein which is used in the method described in the invention
                                                                                                                                                                                                                                                                                                                               This invention describes a novel isolated nucleic acid (I) from coryneform bacteria used for the fermentative production of selected L-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New lrp gene from coryneform bacteria, used to prepare transformants with increased synthesis of amino acids, particularly lysine and isoleucine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EP1090993-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Corynebacterium

This invention describes a novel nucleic acid array involving Corynobacterium glutamicum polynucleotides. The arrays are used to analyse C. glutamicum, particularly for monitoring a fermentation process to determine expression levels of C. glutamicum cellular mRNA. Such monitoring particularly differentiates between expression levels of different strains of C. glutamicum and allows the adjustment of different culture and fermentation conditions. ACA00010-ACA02188 represent C. glutamicum derived polynucleotides described in the disclosure of the
